

Changes in Versa NC4.7 software

- * Improved the quality of object IDs in Multi Frequency operation.
- * A Fast mode (Fmod) has been added to the Sound Duration adjustment in the Audio Panel (page 17). The sound is created using different algorithms. It is more natural than settings 1-5, conveys more information in the form of audio nuances, and behaves better in some iron masking situations.
- * Multitones have been implemented in the Tones setting (page 21) - marked with the letter "M".
